

Logix journeys, from sign-in to delivery

Mobile application UI • English edition

Five services. One connected experience.

Shipping • Transport • Warehousing • Customs • B2B marketplace

110 designed screens • 30 journey boards • access and provider workflows

Includes screenshot and written changes: express, Door to Door, transit, broker authorization, insurance, origin / SABER certificates and Other fields.

A visual review PDF, not a working app or native Figma file. Key screens appear first, followed by detailed journeys. The appendix explains policies and implementation decisions. Based on the PRD, Logix identity and your supplied edits.

Journey index

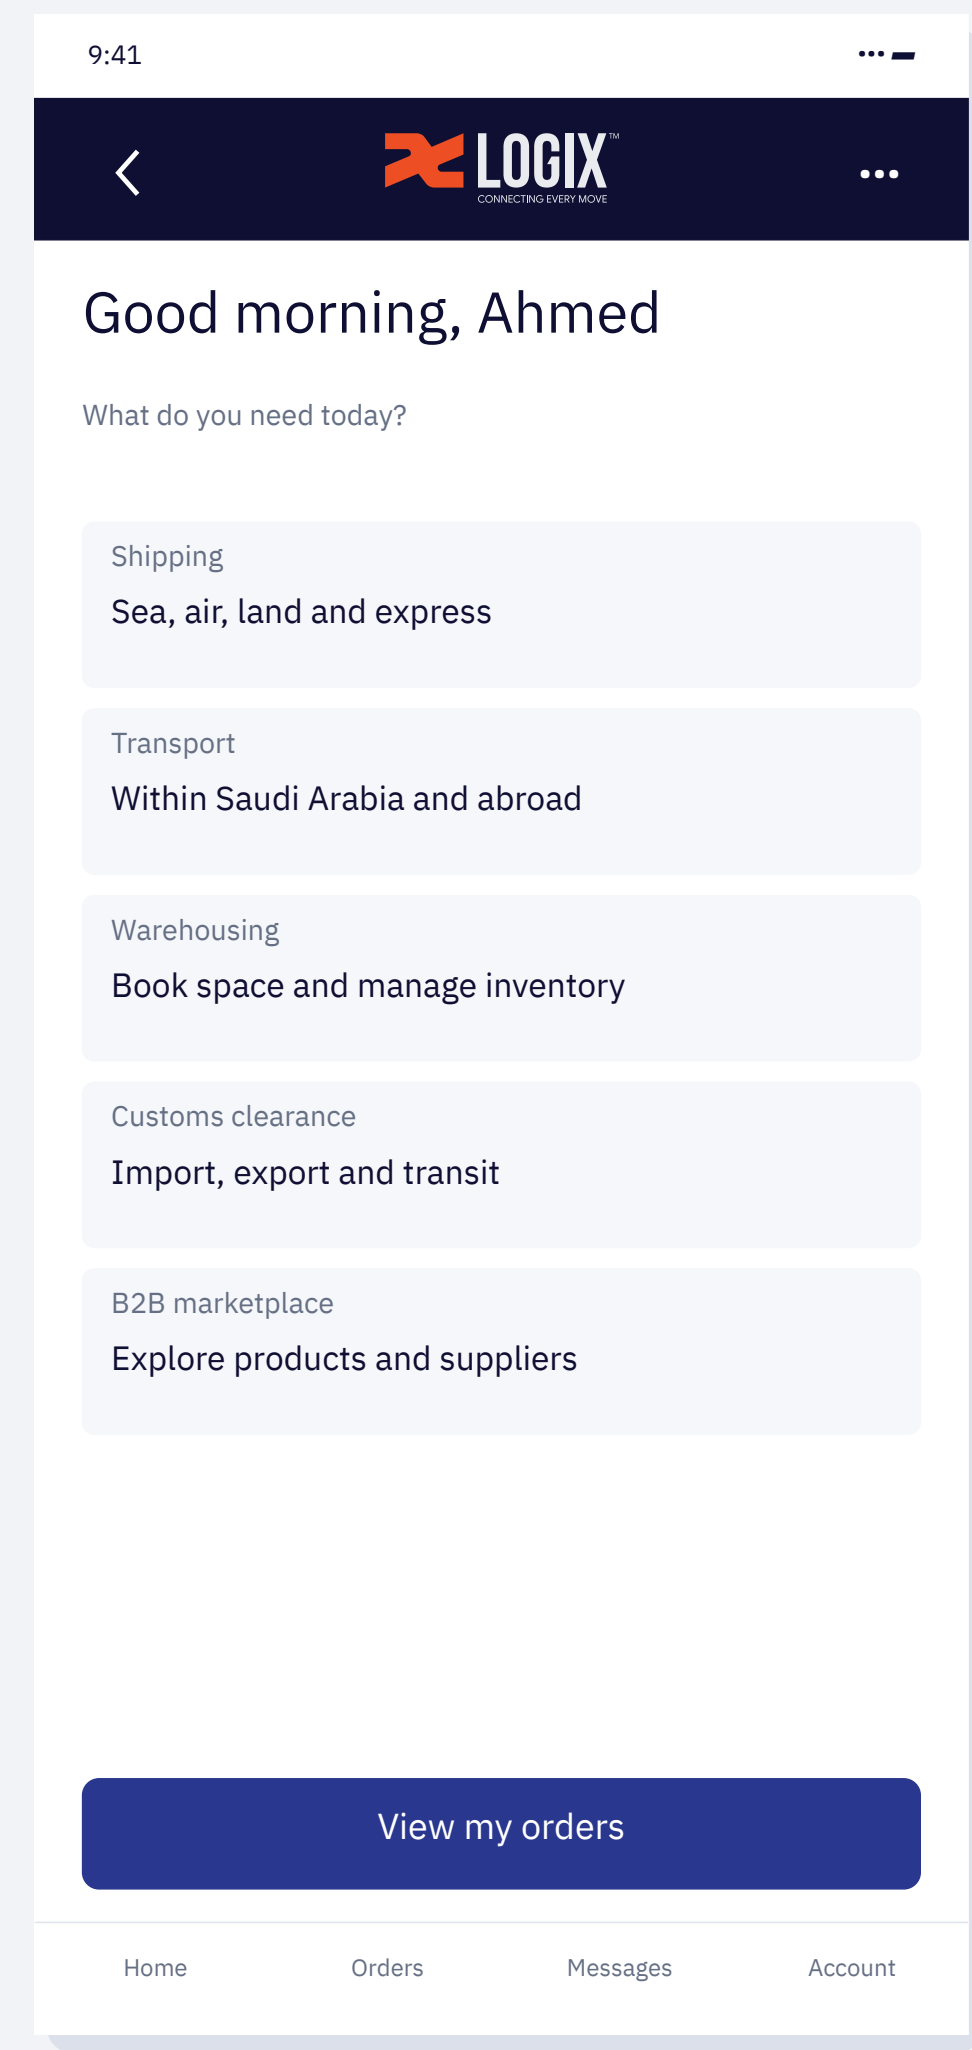

Click a journey to jump to its board

Sign in and choose a role	Customs 04: release and handover
Registration and approval	Marketplace 01: product discovery
Shipping 01: create a request	Marketplace 02: chat and checkout

IN4 is an optional post-issuance claim path. No insurer partnership, automatic issuance or commission is assumed.

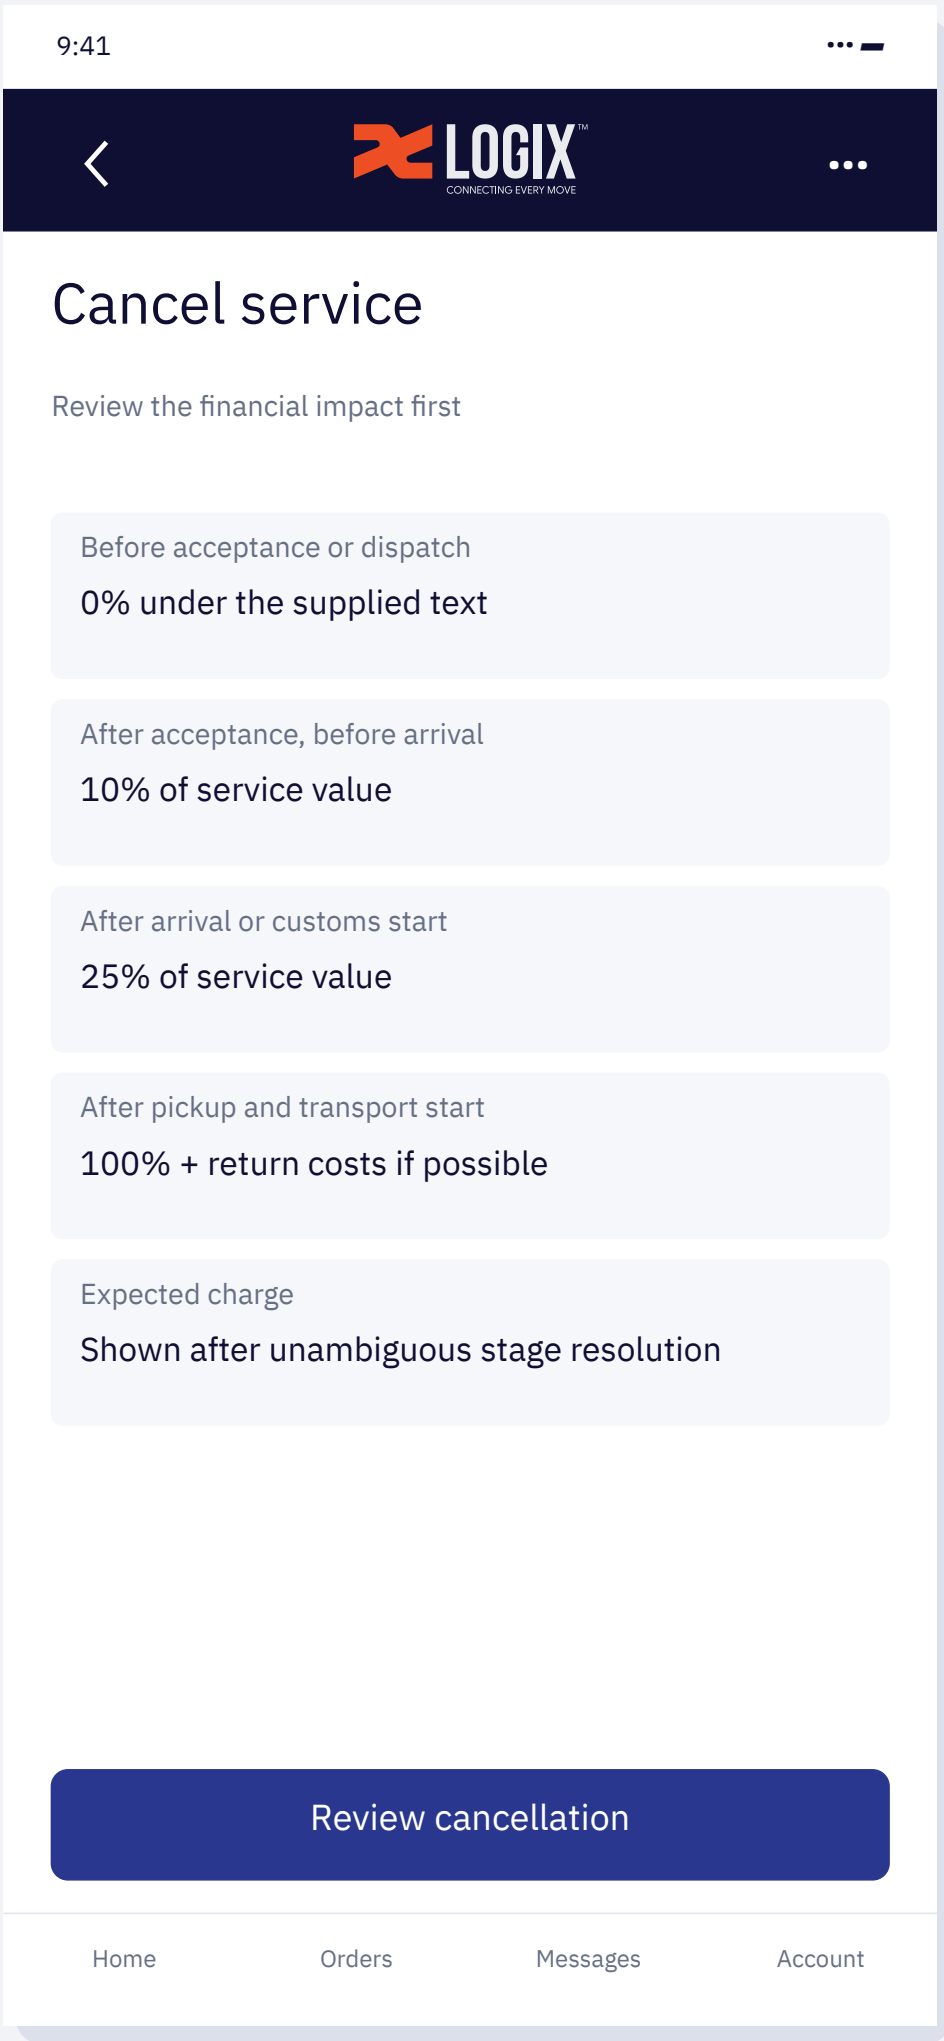

Cancellation and refunds

Alternative path from order details

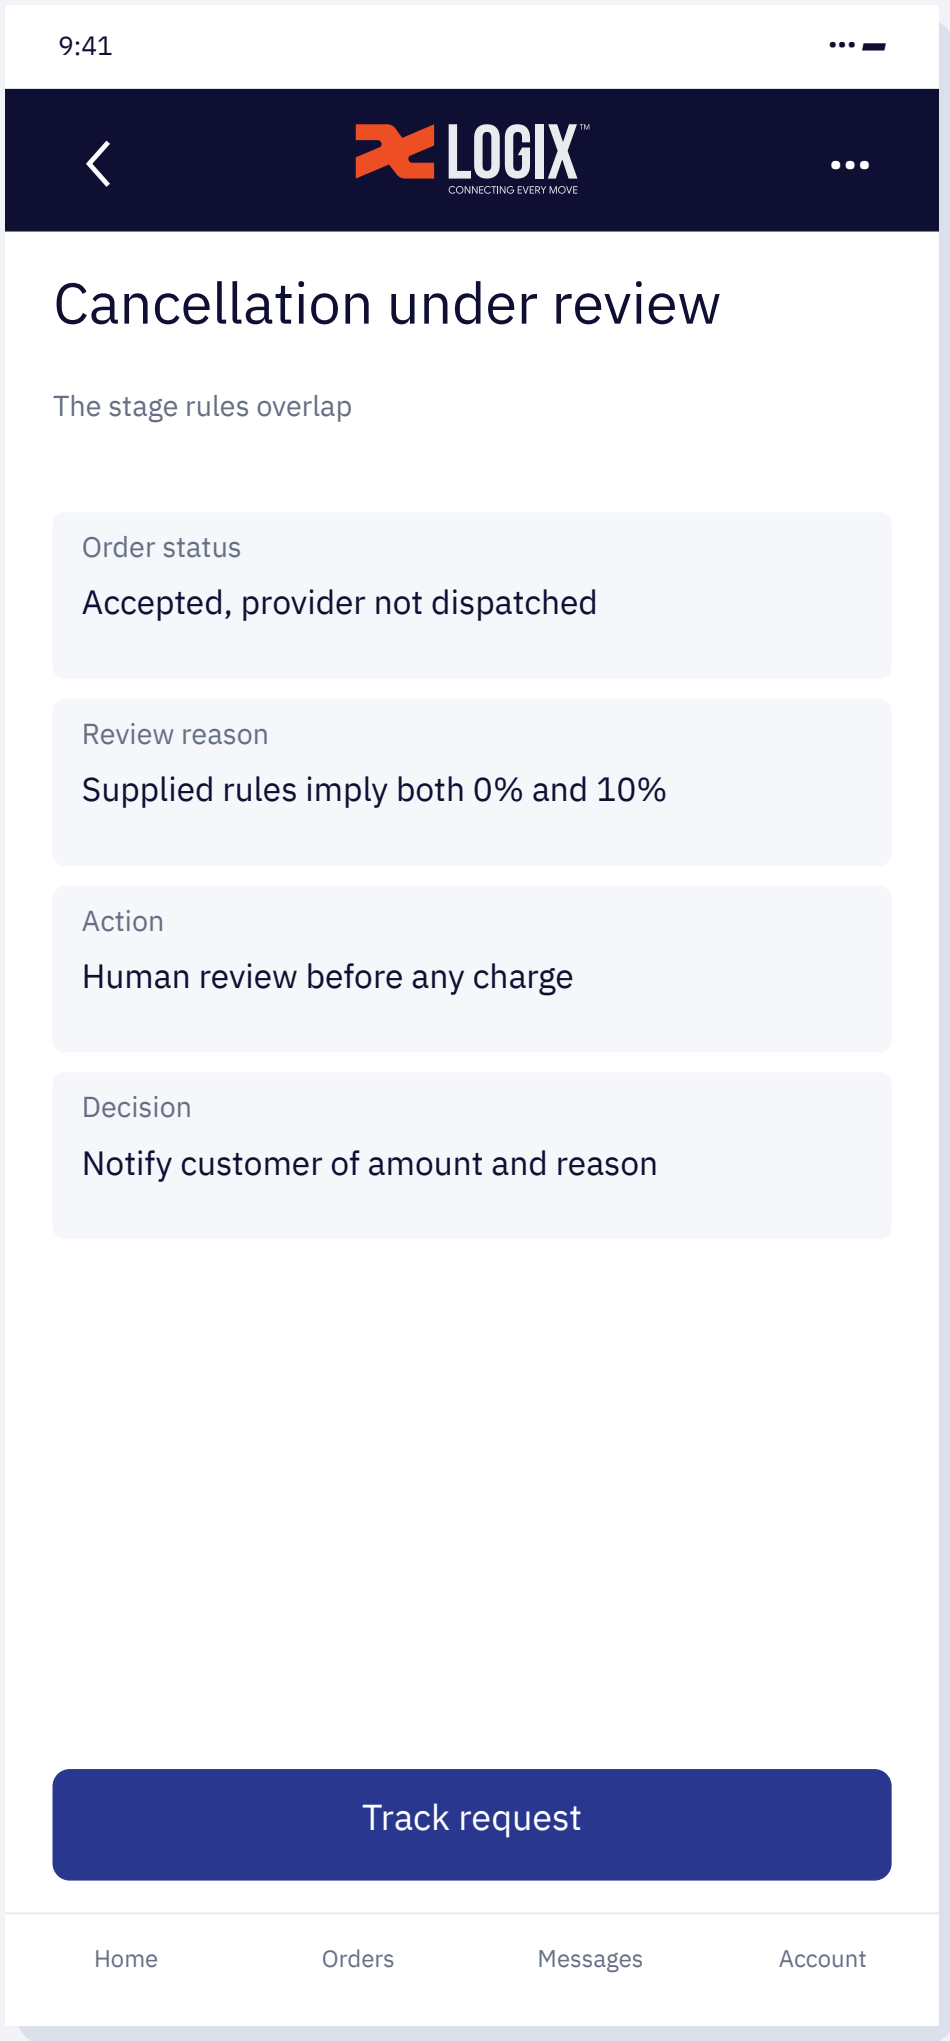

01 / X01

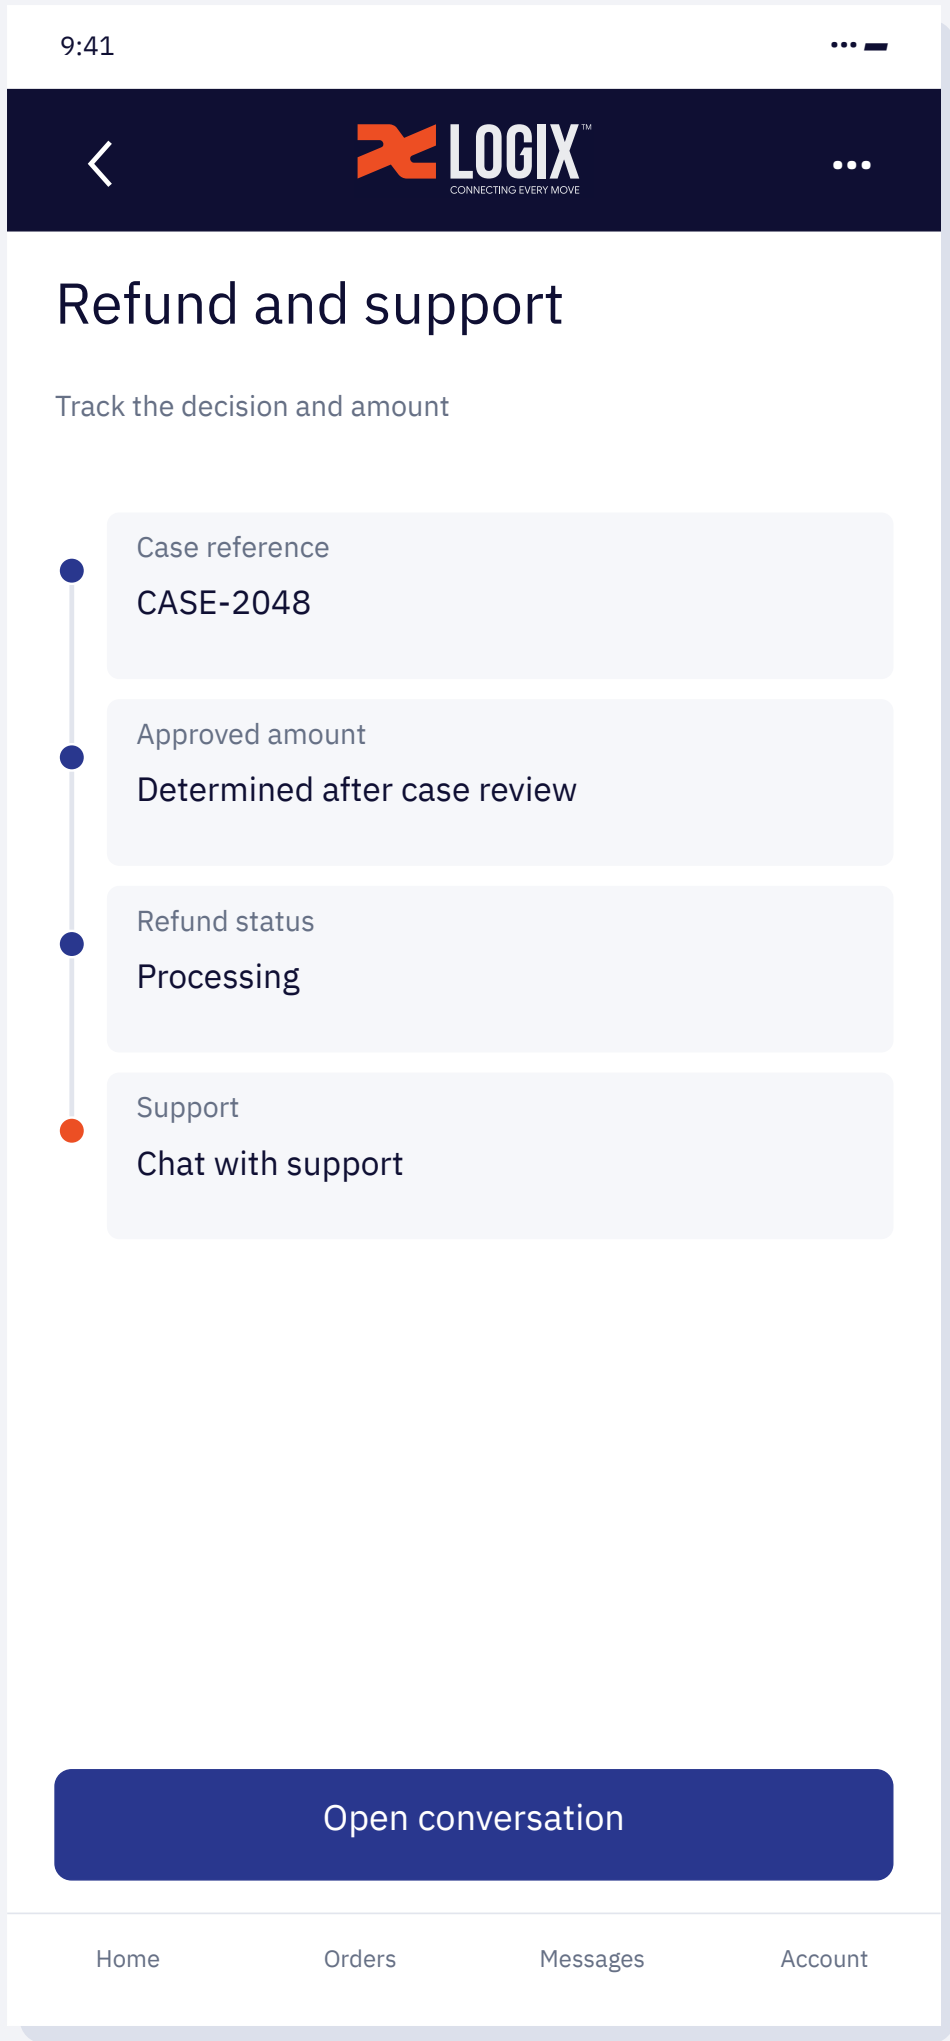

02 / X02

03 / X03

04 / X04

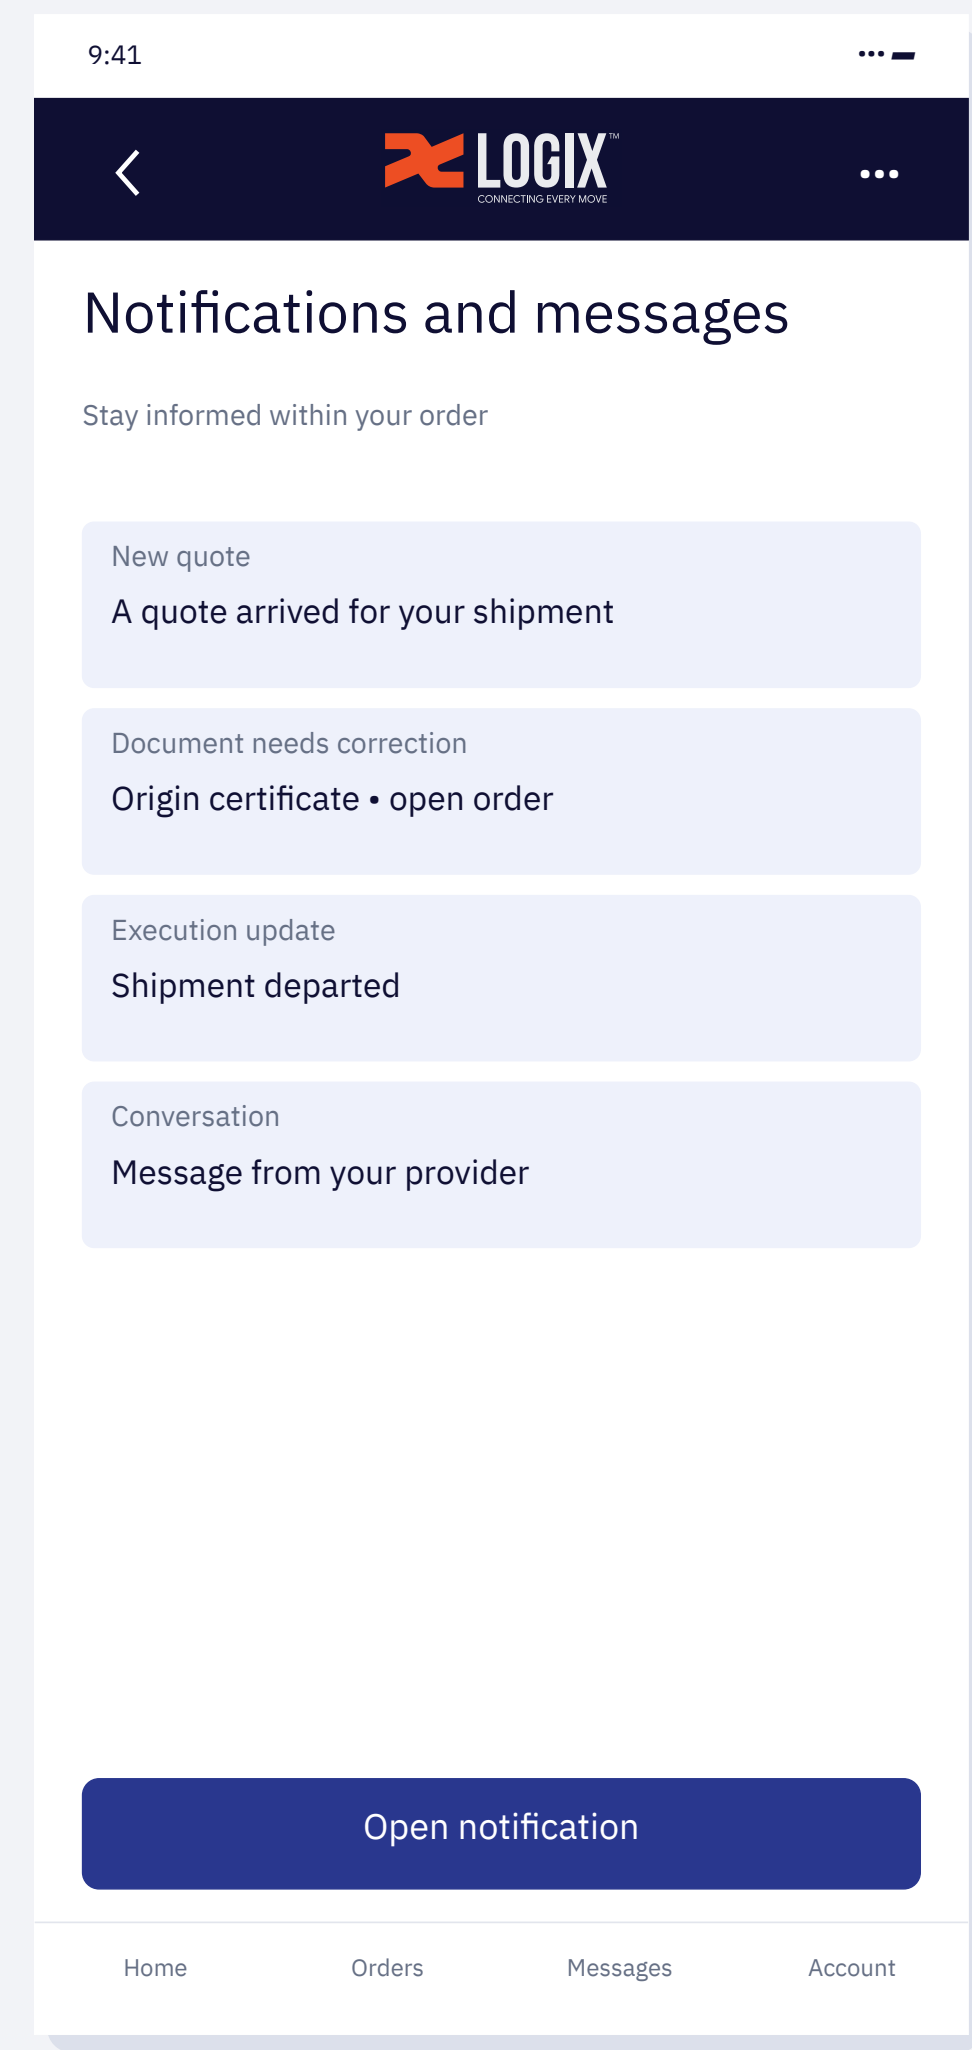

Free cancellation before dispatch conflicts with 10% after acceptance; the policy owner must resolve this before implementation.

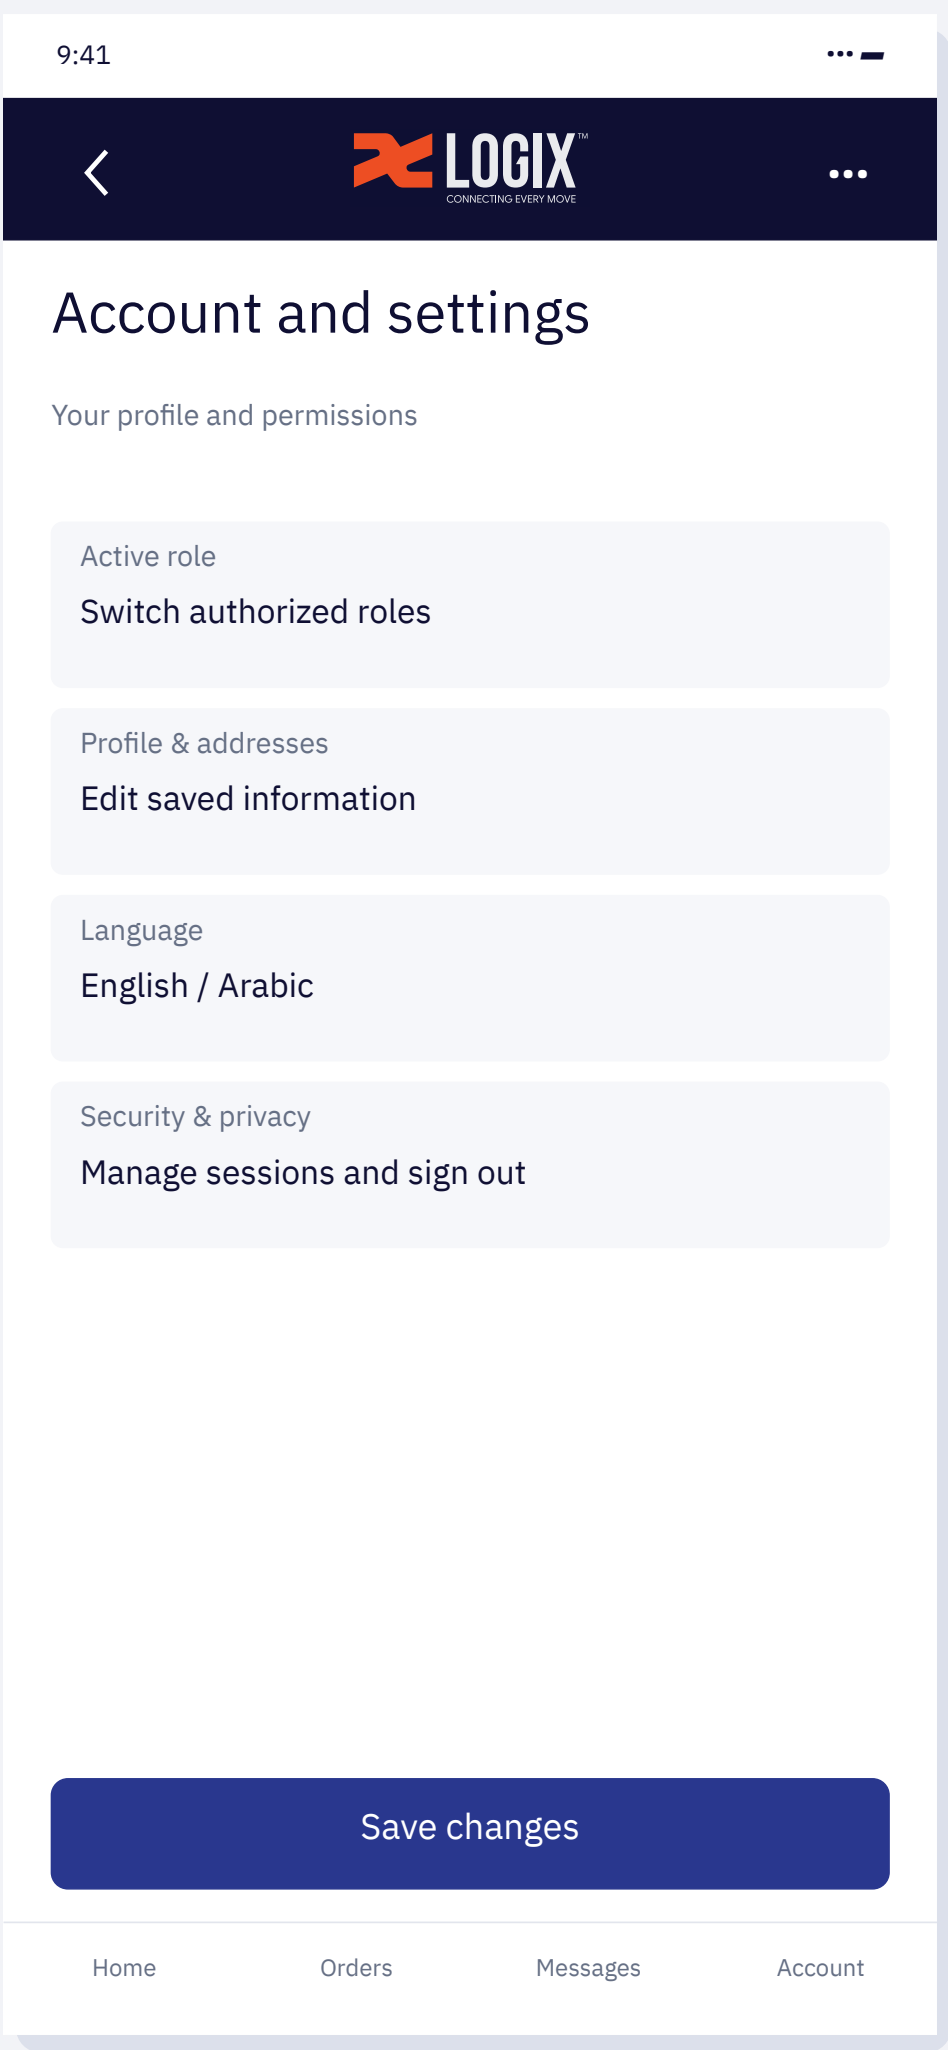

Shared tools and system states

Independent references available across journeys

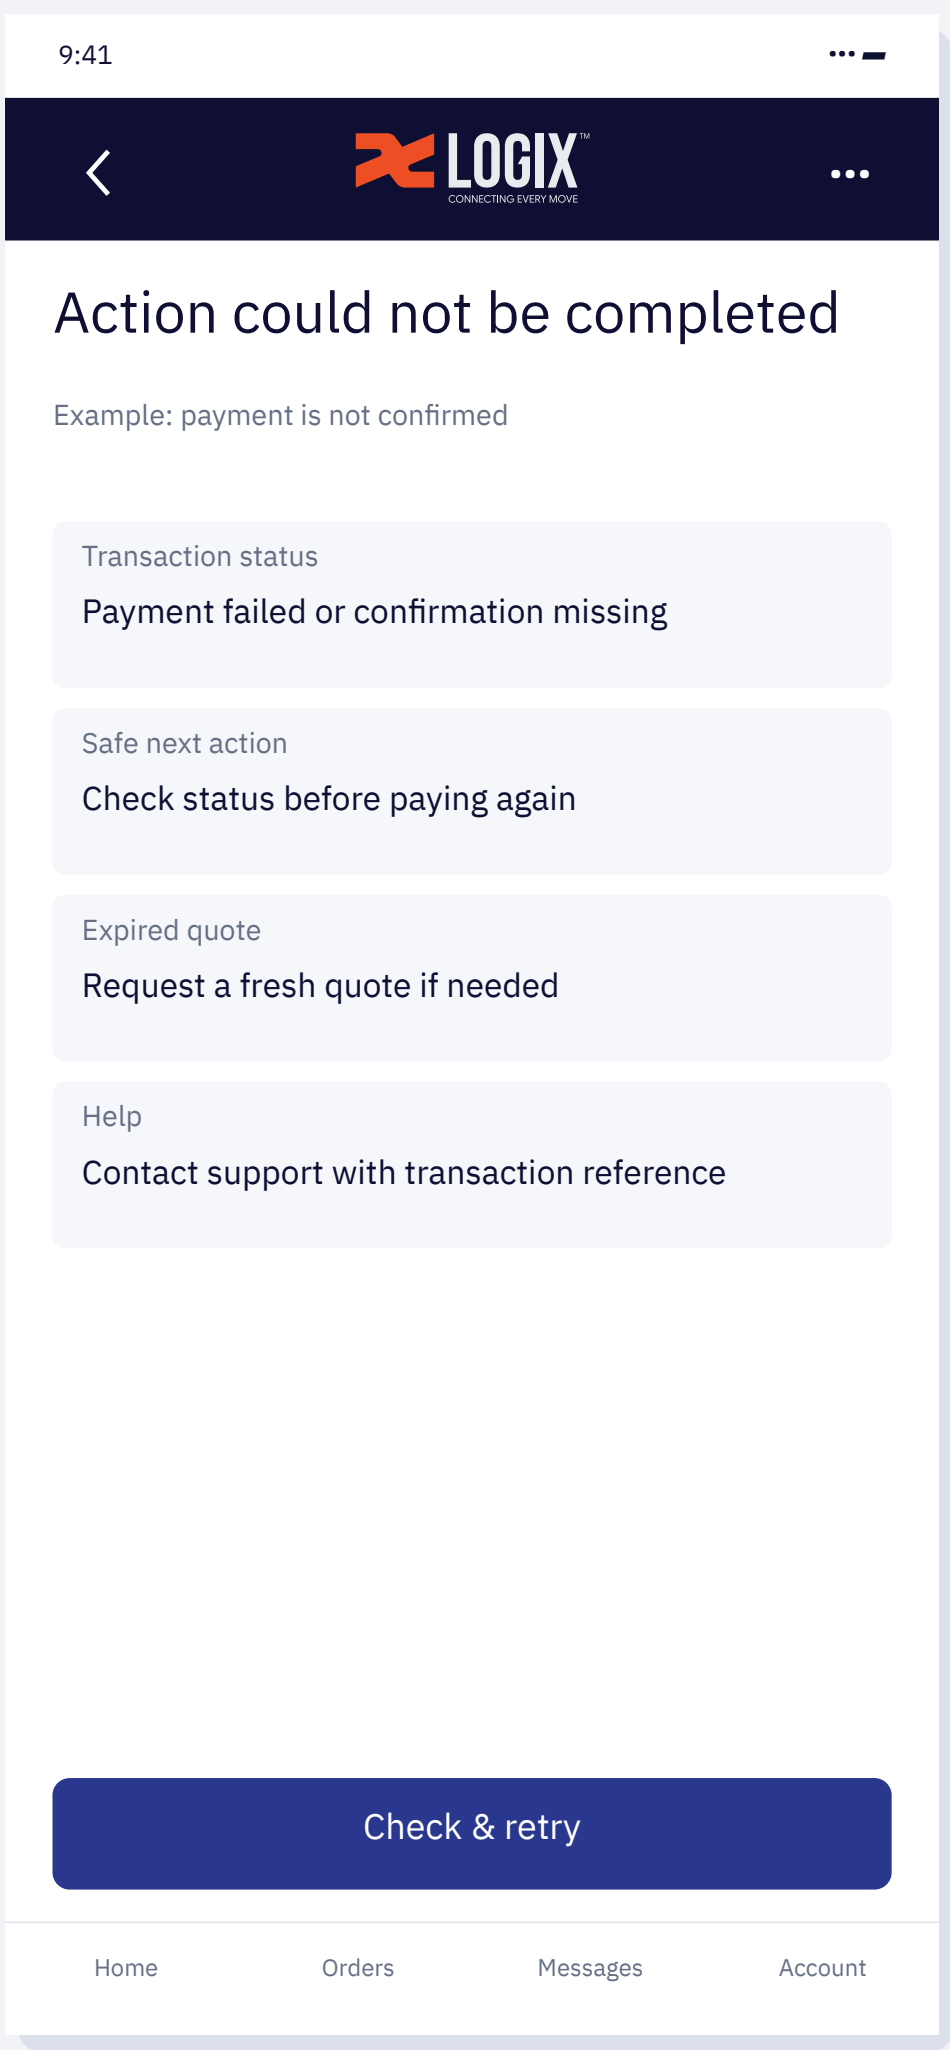

01 / X05

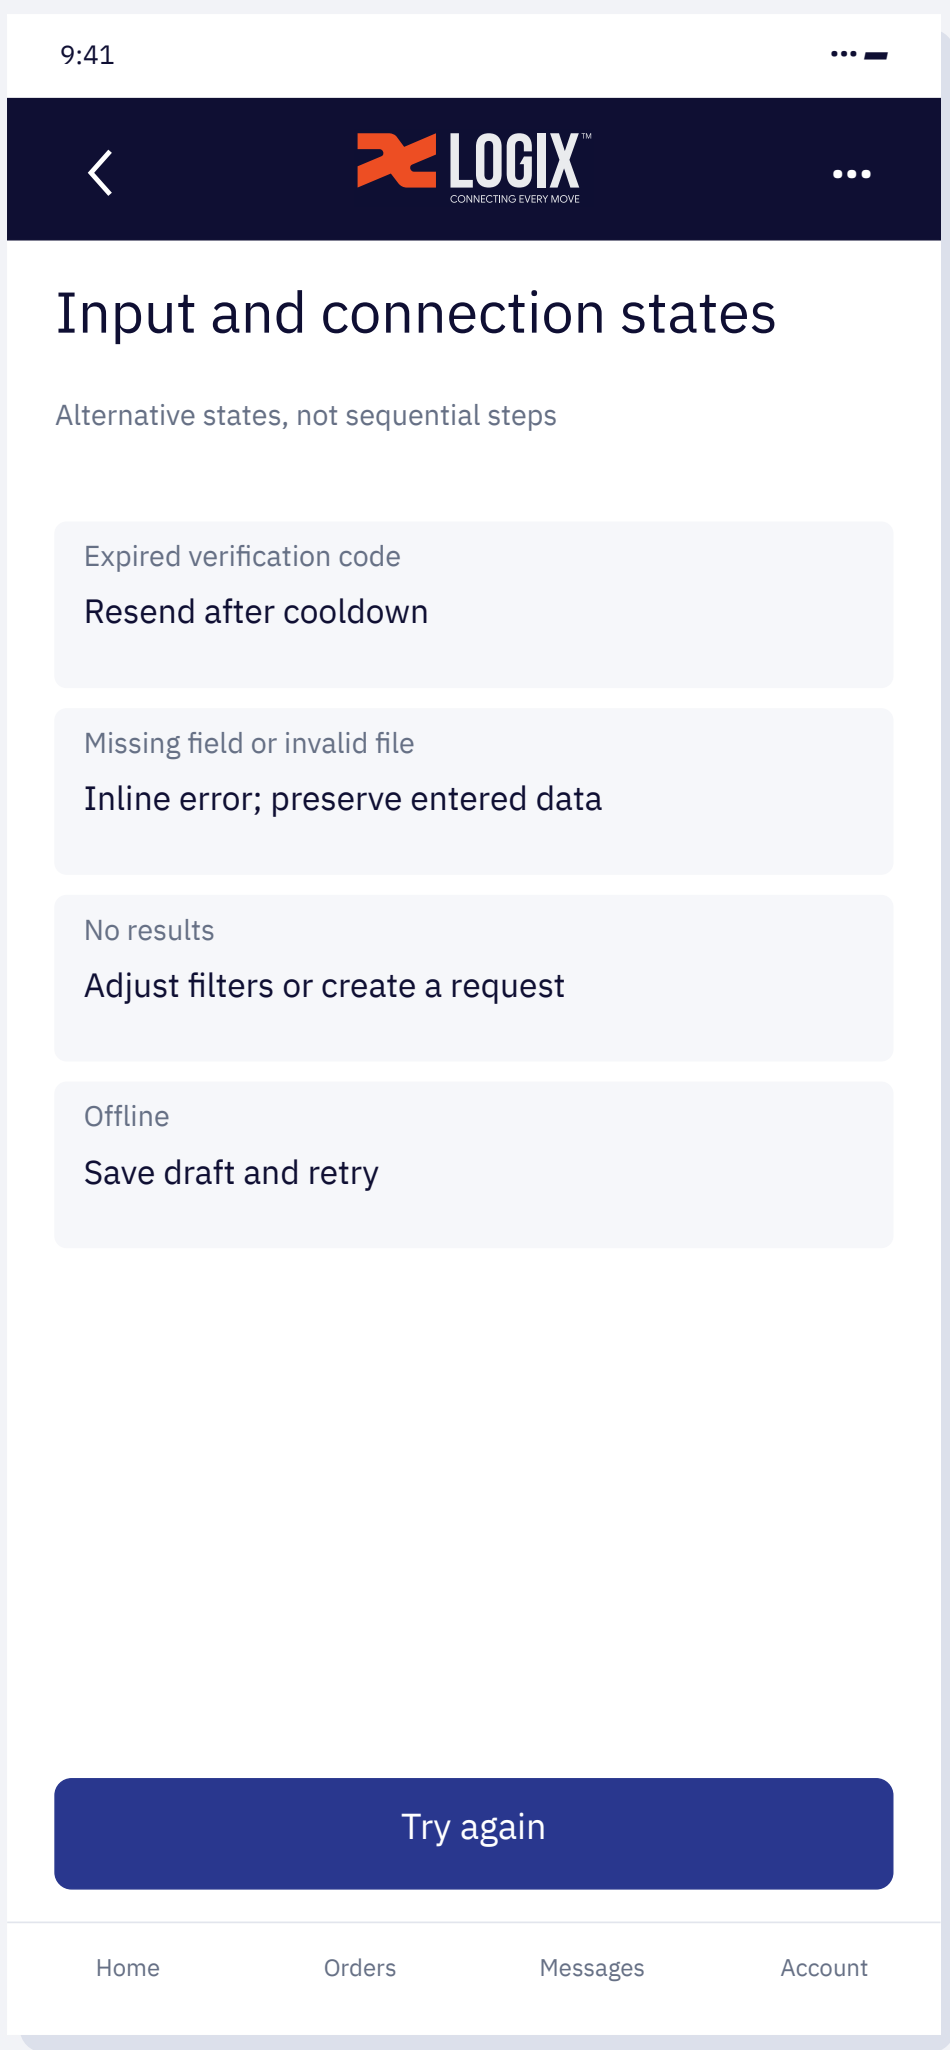

02 / X06

03 / X07

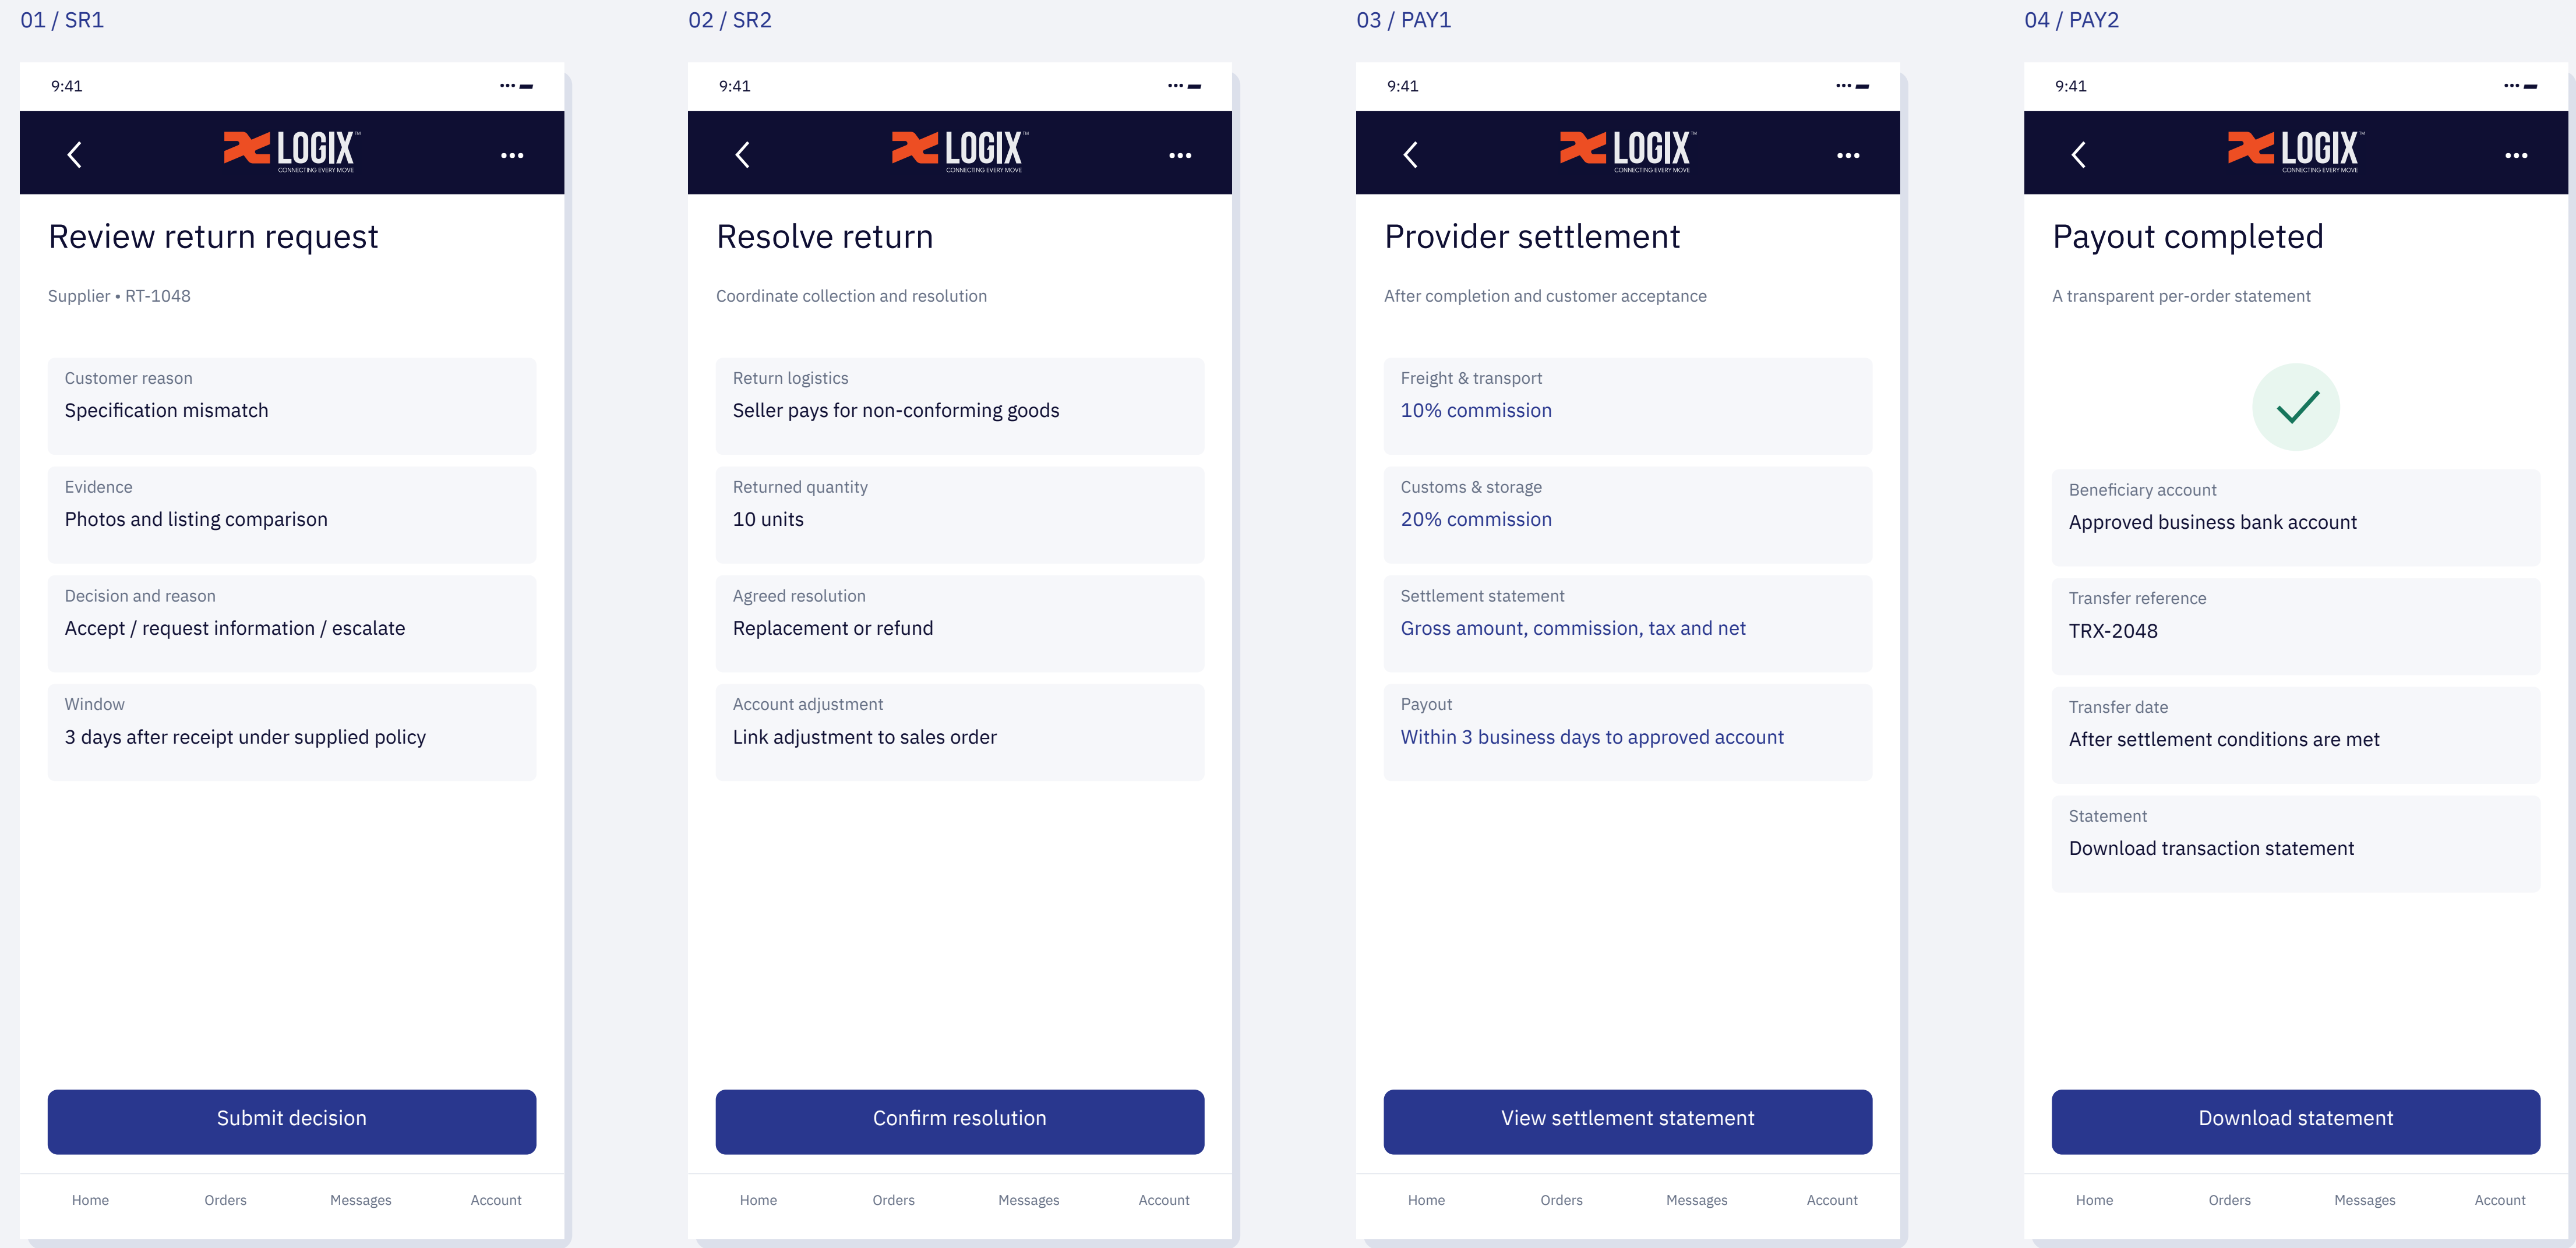

04 / X08

These are independent screens, each opened from its own app context.

Supplier returns and service settlements

Two independent paths: returns / payouts

SR1 → SR2 handles returns; PAY1 → PAY2 settles providers after customer acceptance.

Customer terms

UI summary of supplied terms • show full text before consent

Account and documents

Accurate identity or registration, address and contact details; legal capacity or authority to represent the business. Provide accurate shipment and customs documents.

Cancellation

Supplied rates: 0% before acceptance or dispatch; 10% after acceptance before arrival; 25% after arrival or customs commencement; 100% after pickup and transport commencement plus return cost where possible. The overlap is shown in X03.

Receipt and reporting

Attend delivery and enable unloading. Inspect before signing, record shortage or damage on the delivery record, then submit a platform report within 24 hours.

Returns and missing documents

Return manufacturing defects or non-conforming goods under store policy. Supplied terms prohibit refusing receipt or cancelling due to the customer failure to provide required customs documents.

Responsibility and disputes

Supplied terms describe Logix as a digital intermediary, assign product quality to sellers and transit safety to providers, and name Saudi law and Jeddah commercial courts. This is a presentation of supplied policy, not legal validation.

Consent audit

Record role, terms version, consent time and order reference. Do not preselect consent. Final text approval is required before production.

Seller and supplier terms

UI summary of supplied terms • show full text before consent

Products and specifications

Provide accurate names, specifications, origin, quantities, real photos, units and prices. Products must be new, original, compliant and not counterfeit. Sellers bear product quality, intellectual property and trademark responsibility.

Price and commission

Confirmed order prices are fixed. Disclose VAT and fee treatment. A 3.5% commission applies to each successful sale; net payout occurs within 3 business days after buyer receipt and conformity confirmation.

Preparation and readiness

Pack safely, prepare by the agreed time and send readiness notice in-app. Sellers bear delay or cancellation costs caused by unreadiness or quantity shortages.

Returns and replacement

Accept manufacturing defects, pre-delivery damage or mismatch within 3 days of receipt under supplied terms. Sellers bear financial and logistical return costs for non-conforming goods.

On-platform conduct

Do not route customers to off-platform payment to evade commission. Supplied terms reserve suspension and compensation rights, and name Saudi regulations and Jeddah commercial courts.

Consent audit

Record role, terms version, consent time and order reference. Do not preselect consent. Final text approval is required before production.

Service provider terms

UI summary of supplied terms • show full text before consent

Eligibility and licensing

Maintain valid registration and relevant activity licences: transport or brokerage and vehicle cards, or customs brokerage, with VAT and address documents as applicable. Notify the platform of amendments, renewal or suspension.

Safety and insurance

Providers bear responsibility from collection to delivery and maintain required insurance. Supplied terms describe the platform as intermediary and exclude its liability for provider damage, loss, delay and violations.

Confidentiality and conduct

Use customer and shipment data only to perform the service. Supplied terms allow suspension or cancellation for misleading information, poor service or violations, and name Saudi law and Jeddah commercial courts.

Execution

Quote a clear final price without unagreed extras. Supplied terms request electronic shipping documents, vehicle tracking and timely Fasah clearance. Integration implementation depends on contracting and technical approval.

Commission and payout

Transactions use SAR with clear VAT treatment. Freight and transport commission is 10%; customs and storage 20%. Transfer to the approved business account within 3 business days of completion and customer acceptance.

Consent audit

Record role, terms version, consent time and order reference. Do not preselect consent. Final text approval is required before production.

Fasah integration and implementation roadmap

Team appendix • proposed stages from supplied notes, not confirmation of API availability

01 / Confirm scope

Confirm contracting party, services, data scope, permissions and authorization. Obtain official documentation before specifying endpoints or authentication.

03 / Security and quality review

Review integration with the relevant party, permissions, audit logs, duplicate prevention and outage behavior. Local tests do not constitute Fasah approval.

Application build order

Build access, permissions, requests, quotes and payment first; then execution and documents; then marketplace, returns and settlements; finally approved integrations and insurance partnerships.

02 / Sandbox testing

Once test access is supplied, test declaration, clearance-status and manifest exchange within approved capabilities. Keep credentials server-side, never in the mobile app.

04 / Production activation

After approval and production credentials: phase rollout, monitor errors and show status source to customers. Clearly identified manual updates remain available when integration is absent.

Release acceptance criteria

Test every service and role end to end in Arabic and English. Validate uploads, financial calculations, customer-data protection, payment failures, integration outages and refunds.

Decisions to resolve before development

Design boundaries and interaction rules

Cancellation fees

Accepted-but-not-dispatched orders match both 0% and 10%. Define storage and non-vehicle service cancellation milestones. Until resolved, use human review with no ambiguous automatic deductions.

Authorization and insurance

Authorization creation remains a request until official confirmation. Insurance requires a request, quote and insurer-issued policy with terms and limits; do not assume commission or immediate coverage.

Marketplace and finance

Classifieds-style discovery leads to B2B purchase and platform settlement. Business finance appears only for eligible companies with an approved partner and terms; it is not guaranteed for every account.

Commission and tax base

Confirm whether commission includes VAT, government charges and pass-through costs, and how commission tax is treated. Screen amounts are illustrative, not approved tax calculations.

Localization and direction

Arabic is RTL and English LTR. Isolate number and code direction. Preserve values when navigating back; show conditional fields and the source / timestamp of every tracking update.

Scope of this edition

Includes core screens and requested journeys for both sides. Shared system states are references, not separate variants for every field. Names, orders and vector product images are illustrative. A full web admin console is outside this file.
